

ASSOCIATE DEGREE NURSING PROGRAM

End-of-Program Student Learning Outcomes

Consistent with the philosophy, the curriculum is designed so that graduates of the Associate Degree Nursing Program at BCCC are able to:

1. Apply the concept of health and illness as a basis for nursing practice.
2. Use critical thinking skills to apply knowledge from the biopsychosocial sciences, the humanities and nursing theory in making client care decisions.
3. Utilize the nursing process in providing health care to a culturally diverse population.
4. Implement teaching strategies to promote wellness, prevent illness and restore health to clients with health care needs across the life span to enhance integrity.
5. Manage nursing care of clients with health needs in varied health care settings utilizing evidence-based practice.
6. Utilize collaborative and therapeutic communication skills with clients, their families, significant others and the health team members in the delivery of health care.
7. Provide safe and competent care within the ethical and legal parameters of nursing.
8. Assume responsibility for continued educational and professional growth.
9. Utilize technology to access, retrieve and develop information related to nursing education and nursing practice.
